Tons, tonnes, short tons & hundred weights

Most lifting items nowadays will be rated in tonnes and kilograms. The symbol for a metric tonne is always a small "t". 1 t = 1,000 kg. The old imperial Ton always has a large "T" and is equal to 1,016 kg. So if you come across a piece of lifting gear rated in old Tons you can, for practical purposes, convert it straight into tonnes. The old Ton is divided into hundredweights [cwt]. There are 20 cwts to 1 T. 1 cwt = 50.8 kg. Just to confuse us, the Americans have their own ton which is often referred to as a short ton. 1 US ton = 907 kg.
