

# TEXTILE PAINTS & DYES

## HATO@SILK PAINTS FOR SILK AND LIGHT FABRICS

## HATO@SPRILA

**HATO@Sprila** Designed for use on silks with a sheen, these water-based paints will maintain the material's lustre, rather than mattifying it down. When used straight out of the pot, HATO@Sprila will not bleed at all. It has

a very thin consistency which makes it suitable to spray as well as paint by brush. To reduce the intensity of the colour, dilute with the colourless HATO@Sprila [we tried water, but found it started to bleed heavily making it impossible to achieve a clean line]. When using on FR fabrics [page 128] ensure the fabric has been washed and completely dried before applying the HATO@Sprila, as the salts from the Flame Retardant can interact negatively with the paints. Always do a test first. Once dry, the finished article can be washed on a gentle cycle with a mild detergent [30°C] without affecting the finish. We think this product would work well for costumers and window dressers who need to maintain the finish of the fabric they are working with, without affecting the fabric's hand. SPECIFICATION: Coverage 6-8 m<sup>2</sup>/L Dilute with Colourless.

**Hato@Silk SM** is a concentrated paint system for use on lightweight fabrics made of natural or synthetic fibres [such as silk, tulle or voile]. Based on a new type of binder, which when dry produces an extremely soft "hand" in the fabrics painted. Hato@Silk SM is free of lead or cadmium pigments and is water-soluble and odourless. It is colourfast and safe to use in washing machines using the delicate cycle and mild detergents at temperatures up to 40° C.

- ✓ Very soft "hand" ✓ Machine washable for costumes
- ✓ Virtually bleed-free ✓ No extra fixing required

Hato@Silk SM is intended to be diluted with water in ratios from 1:1 to 1:3. It can be applied either by brush or spray gun. Even when heavily diluted, sharp cut lines can be painted without bleeding into adjacent fibres. When dry, it does not need a further fixing. See also Hato@Sprila 🖌️ .

**FLINTS WATER-BASED DYES**

**F**

**Flints Safe Water-Based Dyes** are ideal for working on cloths and gauzes which need to remain supple and they normally require no fixing. The dye can be applied by brush or spray like conventional scenic paints. Items such as rope can be soaked directly in the dye and hung up to dry. Our blue dyes are used worldwide for skycloths. Supplied as a powder in easy to store 250 g pots. To use just add 2 litres of hot water to 25 g of dye. Each container holds enough dye to make approximately 20 litres depending on the final colour tone required [the chart shows the colours full and half strength]. Our silver grey is made from one dye type so it remains grey even when heavily diluted, many dyes veer towards brown or blue as they are diluted. This dye is ideal for weathering timber. Flints dyes are not suitable for use on synthetics. ✓ Safe and simple to use ✓ Normally require no fixing ✓ Keeps cloths supple

Flints Safe Water-Based Dyes	size	price
	250 g pot	£18.17

**Fixitol P** If the dyes are being used on very thick fabrics such as velour or if the cloths are being handled frequently then the dyes can be additionally fixed by spraying with Fixitol P which will help prevent any rub off. To spray, add 40 g Fixitol per litre of water.

Fixitol P	code	1 kg	code	5 kg
	DPP20011	£6.90	DPP20015	£19.57

Check out the **HATO® Nano Textile Protector** on page 3! It's ideal for protecting cloths from spillages once finished, or dyed / painted costumes from messy actors eating when they shouldn't! We tested it with Pigs Might Fly Blood and

it prevented the blood from saturating the cloth. Even better, treated materials can be machine washed several times before requiring reapplication! We think this is a great tool for costumers.

**HAUSSMANN LEATHER PAINT**

**Haussmann Leather Paint** This water-based paint can be applied direct to leather, artificial leathers, PVC films and fabrics. A useful product for any propmaker or costumer - perfect for detailed leather work, or to simply change the colour of a pair of shoes on set or the runway. It works especially well with soft ballet slippers providing lasting results. Prepare the leather surface thoroughly with White Spirit [page 57] first to degrease. Semi-matt finish. SPECIFICATION: Coverage: 6-7 m<sup>2</sup>/L. To reduce the intensity of the colour, thin using the colourless paint.
