

peel Release Coat

A revolutionary wallcovering release coat for use on a wide range of surfaces including plaster and wood.

- No more soaking or scraping off old wallcoverings
- Simply peels off easily in complete lengths
- Provides a perfectly uniform coating to which normal wallcovering adhesives can be applied
- Use on exhibitions and displays and in hotels and restaurants
- Can be used on plaster, plywood, hardboard, brick, glass etc.

Peel is a unique product that when applied to any surface provides a uniform coating to which any wallcovering may be hung using a normal adhesive system. The resulting bond gives a high shear strength for durability and a relatively low peel strength for easy removal.

Peel is the ideal solution for use in places where regular changes of decoration are required and speed is of the essence – for example hotels, restaurants, exhibitions and displays. This enables experimentation with decoration and with your choice of substrate.

Peel can be used on plaster, plywood, hardboard, brick, glass etc. and **Peel** ensures that all surfaces are perfectly sealed and primed ready for application.

Peel is very economical, saving time and labour costs. With its ability to give increased slip, paper and pattern matching on **Peel** coated walls is a lot easier. Any errors or damage can be easily rectified without damaging any adjoining material. **Peel** is a great new aid to good decoration.
